

# Agent Design Canvas

version 1.0  
2025-06-11  
Abundly.ai

Name

Purpose/Mission

## Triggers

- When is the agent woken up?
- What does it do when woken up?

## Knowledge & Context

- What data does the agent need?

## Outputs/Actions

- What does the agent produce or do?
- What are the key deliverables?

## Tools/Capabilities/Integrations

- What capabilities does the agent need?
- What external systems does the agent need to talk to?
- What shared workspaces should the agent access?

## What Can Possibly Go Wrong?

- What are the key risks & vulnerabilities that we need to address?
- Hallucination? Abuse? Data leakage? Cost?

## Human Collaboration

- How and when are humans involved in this?
- When does the agent decide/act on its own, vs wait for human input/approval?
- When does the human trigger an agent, and when does an agent trigger a human?
- Division of responsibility between human & agent?
- Who interacts with the agent and how? One person? Multiple people?

## Success Metrics/Indicators

- How do we know it is working & adding value?
- After a change, how do we know if it became better or worse?
- How do we know if we are 'done' (or done enough)?
